C. G. 245 [251] pomegranates) are grown in abundance. They are preserved in sugar by a boiling-down process. C. G. 244 Important vegetables are lentils, beans, peas, onions, eggplants, celery, garlic, fennel, mustard and several kinds of cucurbitaceous plants. C. G. 231 The raising of silkworms is common, especially in the West. Beekeeping is widespread; hollwed-out logs are used as beehives; these are covered against the rain with pieces of bark or straw mats. Honey is also gathered from wild beees. C. G. 224 Hunting is of some importance in the highlands (deer, rabbits, fowl); it is traditionally engaged in by herdsmen, who take turns watching the herds. C. G. 226 Fishing is of importance only on the Black Sea coast and on the lower course of the rivers running into it.

C. G. 231 Because of the lack of pasture land, cattle-breeding is less important in the Georgian lowlands than it is in the mountains. The Georgians keep buffaloes, oxen, pigs, horses, donkeys, mules, goats and sheep. The latter usually are of the fat-tail variety, except among the Svan. C. G. 233 In summer, the herds are taken to the mountain pastures by herdsmen. 221 The herds are led by a billy goat and are kept together by goats; dogs accompany the herds only as protectors against wolves. To keep the latter at a distance, fires are kept going during the night.

Cattle and sheep breeding have a greater relative importance for the Svan and especially the Pshav and Tush. The latter are predominantly seminomadic herdsmen; the men

C. G. 233 221 spend the winter in the steppes of the lower Alazani river with their herds of sheep. On the other hand, the Tush living on the Lower Alazani, and also the Bats, move with their families to the mountain pastures in summer, where they live in huts, sunk into the ground and covered with slates. The indigenous means C. G. 493 of transportation is a clumsy two-wheeled cart (uremi) drawn by a pair of oxen or buffaloes. The large wooden disk wheels are firmly joined to the axle-tree. In the mountains, sledges are used to carry in the hay. In a peculiar vehicle called chochiala uremi rolling and sliding are combined: the ends of two long poles attached to the yoke, which slide on the ground, serve the purpose of a pair of front wheels.

C. G. 231 241 The traditional economy of the North-West Caucasian peoples (Abkhaz and Circassians) was based on horse and cattle breeding, agriculture (millet, maize, wheat, rye) some horticulture, beekeeping and (Abkhaz) wine growing. The Abkhaz methods in these activities are the same as the Georgian. Formerly, their economy was largely pastoral, but in the second half of the nineteenth century they became more agricultural. The country is better suited to agriculture, though horse and sheep raising are still important. The Western Circassians, too, were more dependent on cattle-breeding before their forced migration from the mountains to the lowlands of the Kuban. The Kabardians are still mainly sheep-, cattle-, and especially horse-breeders: the Kabardian horses are famous for their
